Roll with the Market teacher guide

Every phase, what to press, what to say, and what to do when something breaks. Personal Finance, 90 minutes, sections 2B and 4B.

Four screens, four links

Screen	Link	Who
Students	`www.coachw.club/roll`	Every student laptop
Teacher hub	`www.coachw.club/roll/teacher.html`	Your laptop. Drives everything.
Classroom display	Open display link on the hub	Smartboard, extended from your laptop
Observer	Observer link on the hub	The evaluator's laptop, read-only

The display and the observer links carry the session, so always open them from the hub. On the display, press F for full screen and D for the dyslexia font.

Before the bell

- [ ] Thinking Logs on desks, one per seat.
- [ ] Hub open. Pick the session for this section, or create one with [**New 2B session**] or [**New 4B session**].
- [ ] Display open on the smartboard from the hub link, full screen. It shows the class code.
- [ ] On the hub, [**Run health check**] under Assessor. It should read OK. Green before you open the door.
- [ ] Wayground set loaded in a separate tab.
- [ ] Observer link sent to the evaluator.
- [ ] Decide whether to turn on [**Class code sign-in**] now. Leave it off unless Google sign-in is likely to be blocked.

Standing moves, all period

- Circulate. The hub's big button is readable from across the room on purpose.
- Wait three seconds after every question.
- Volunteers first, then [**Pick a student**] on the hub. It draws from students not yet called on.
- One chime to reset attention, then wait. Do not talk over the room.
- Point at the objective at every transition. It is on every screen all period.

After class

Export panel on the hub. [**Full CSV**] downloads one row per response with level, override, peer levels, math, archetype, team, and probe answer. [**Class summary**] opens a printable page with the percent at Level 3 or higher by game, growth, math accuracy, survey results, and how many students met the goal.

How the hub works

The large button at the top left is always the next thing to do, and it says what it will do. Press it to move the lesson forward. The panels below it are for reference.

The round cycle, every round of every game

Button reads	What happens
[**Lock decisions (18 of 24 in)**]	Students are choosing IN or OUT. The count shows who has locked in. The timer does not lock the round for you. Chime when the count stalls near full, then press. Anyone who has not decided is OUT for the round and earns $1.
[**Roll the dice**]	The display rolls. Student screens show a waiting screen with no dice and no numbers, so eyes go to the board. Look at the board yourself.
[**Rolling. Reveal now**]	The reveal happens on its own after the dice settle. Press only to skip ahead.
[**Force settle (20 of 23 entered)**]	Students compute and enter their new balance. The round settles itself once everyone is in. Press only if someone stalls. Two wrong tries and the site shows the answer and moves them on.
[**Start round 2**]	Round over. Each student's chart updates. Press when ready for the next round.

Decide timers: practice 45 seconds. Normal rounds 60 seconds. Checkpoint rounds 2 minutes. Game 2 team rounds 2 minutes, or 3 with a checkpoint. [**Add 30 seconds**] sits under the big button.

Panels

Panel	Use it for
Phase	Jump to any phase if you need to skip or go back. Pick from the list and press [**Jump**].
Toggles	Leaderboard on the display, vocabulary on the display, seating chart, bias survey, display dyslexia font, class code sign-in, joining locked.
Responses	Every written response as it arrives, with its score. The Override menu replaces the score the student sees.
Distribution	Count at each level for Game 1, Game 2, and the exit ticket.
Spotlight	Strong responses the assessor nominated, with a reason. [**Push to display**] shows one on the board without a name. [**Clear**] takes it down.
Flags	Students at Level 1, students who missed math twice, students with nothing written this game, late joiners.
History	IN and OUT counts and the roll for every round, both games. Use it for the Game 1 to Game 2 comparisons.
Assessor	Green means working. Degraded means slow. Down means students are self-assessing.
Export	[**Full CSV**] and [**Class summary**]. Use them after class.

Phase by phase

Times are minutes into the period. The button named at the end of each phase is what moves you to the next one.

Lobby and agenda `0 to 2`

Students	Sign in, set a name, pick an emoji and a color, then read the agenda.
Display	The site address, the class code, and a count of who has joined.
You	At the door, greeting. Give the instruction once.

Say Sign in. Set your name, pick an emoji and a color. Then read the agenda.

Watch for	If more than two students fail Google sign-in, turn on [**Class code sign-in**] and move everyone to it. Do not troubleshoot one student while 22 wait.
Press	[**Show the agenda**], then [**Start the vocab warm up**]

Vocab warm up `2 to 7`

Students	A button that opens Wayground. Run it as you normally do.
Bridge out	About 20 seconds, then chime and send them back to the tab.

Say Two of those words decide everything you do for the next hour. Bull means prices are going up. Bear means down. Keep them.

Press	[**Start Learn to Play**]

Learn to Play `7 to 11`

Rules	Press [**Show rule 2 of 6**] through rule 6. Each appears as you talk. Do not read them aloud. Say what the screen does not.
Practice	Press [**Start practice round 1**]. Three rounds, no writing, no score. Narrate round 1. Stay silent for rounds 2 and 3 and watch the math.
Ask	Before Game 1, with wait time. Expected answer: IN gains more often than it loses.

Say Four of six faces mean up. So what does that tell you about being IN?

Watch for	Practice math misses in the Flags panel. Those students need you early in Game 1.
Press	[**Start Game 1**]. Every balance resets to $100.

Game 1 11 to 23

Rounds — Six. Writing on rounds 1, 3, and 5, plus one round of each student's choice. Round 5 doubles. No stems, no help with the writing. This is the baseline.

Round 1 — Say it once. Say nothing about what a good reason looks like.

Say Pick IN or OUT. Type why. Then we roll.

After round 3 — Strategy share, about 60 seconds. Toggle [**Leaderboard**] on.

Say Top three. What are you doing?

Then — Toggle the leaderboard off and ask. Expected: no, each roll is independent. If a student says it does, do not correct it yet. That is the recency effect, and it comes back in the debrief.

Say Does any of that predict the next roll?

Round 5 — Announce before they decide, then watch the IN count in History.

Say This round counts double if you are IN. OUT still earns one dollar.

Round 6 — Students who have not added their own reason are required to write one. The screen tells them.

Press — [**End Game 1**], then [**Show Game 1 feedback**]

Feedback 23 to 25

Students — Their feedback on each Game 1 response, with a level and one thing to try. Two-minute timer.

Say Read your feedback. You have two minutes.

You — Go straight to students in the Level 1 flag. Thirty seconds each. Read the Distribution panel to decide how hard the lesson leans on evidence.

Press — [**Start the CER lesson**]

Claim, evidence, reasoning 25 to 39

Steps — Six screens, each on the display and student screens. Press [**Next: ...**] to advance. The button names the next step.

Open — With the gap, not the definition.

Say Which was harder, deciding or explaining why?

1. **Claim, evidence, reasoning.** The lawyer frame. Claim is the verdict, evidence the exhibits, reasoning the argument that connects them.
2. **Find what is missing.** Model one real Game 1 decision aloud, including where you are unsure. Then do it badly and have the class find the gap.
3. **Three parts.** Have students point to each part. Then push one strong IN and one strong OUT from Spotlight.
4. **IN averages about $3.50 a round.** Ask why anyone would go OUT. Expected: an average is not a promise.
5. **Name the choice you did not make.** The move that separates Level 3 from Level 4.
6. **Scoring guide.** Students score the weak and strong examples. Expected: 1 and 3.

Say Both of these are level threes. One went in, one stayed out. The score is the reasoning, not the pick.

Press — [**Build strategy teams**]

Strategy teams and huddle

39 to 43

Display — Seating chart by table. Each student screen shows their table and seat.

Say Find your team. Sit down. You have one minute.

Then — Explain how the teams were built.

Say You were not grouped by who is winning. You were grouped so that nobody at your table played the same way you did.

Huddle — Press [**Start the 3 minute huddle**]. About 45 seconds each to defend their Game 1 approach. Listen for the Level 4 move out loud and note two students to call on in the debrief.

Press — [**Start Game 2**]. Every balance resets to $100.

Game 2, rounds 1 to 4, team decisions

43 to 52

Rounds — Writing on rounds 1 and 4. Sentence stem on screen. Longer timers.

Say For the next four rounds, your table decides together. Everyone at the table picks the same thing. You have extra time to argue about it.

You — Do not enforce it. The site does not check it either. What happens inside a student who goes along anyway is the point. Note which tables split hard. Give round 4 its full timer.

Press — After round 4 settles, [**Open the probe**]

The probe

52 to 54

Say Was there a call in the last four rounds you did not get to make because your table ruled you out? Answer honestly. Nobody at your table sees this.

Students — A yes names the round and what they would have done. The screen shows what their own call was worth against the real roll, next to their table's call.

You — Twenty seconds of silence after it lands. Then ask, and let the hands speak.

Say Hands up if your own call would have beaten your table's.

Press — [**Start round 5**]

Game 2, rounds 5 to 8, individual

54 to 61

Rounds — Writing on round 7, plus their own choice. Round 7 doubles. Round 8 requires a reason from anyone who has not added one.

Round 7 — Compare aloud. The Game 1 count is in the History panel.

Say Last game, on the double round, we had [N] in. What about now?

Press — [**End Game 2**], then [**Start peer scoring**]

Peer scoring

61 to 65

Students — Two anonymous Game 2 responses from classmates, never their own. A level and one sentence for each.

Say Score two classmates against the same guide. Name what is missing or what works. One sentence.

You — When a student is unsure, ask which of the three parts they can find.

Press — [**Push the bias survey**]

Bias survey

65 to 68

Say Seven traps. Check any you felt today. Then one sentence about the strongest one.

You — Two minutes, then take two answers aloud. Volunteers first, then pick. The survey can also be pushed at any other time from Toggles. A student in the middle of entering a balance sees it once the round settles.

Press — [**Start the mind traps debrief**]. This closes the survey.

Mind traps debrief

68 to 74

Display — The seven traps with how many students felt each one.

You — Work from their data, not the list. About two minutes each.

1. **Recency.** Return to the streak argument from the Game 1 strategy share. Each roll is independent.
2. **Loss aversion and risk-taking.** The two double rounds. Who went IN when behind, and why.
3. **Herding.** The probe. Call on a student you noted during the huddle.

Say You wanted out. Your table said in. What happened in your head when you went along?

Protect — Herding is the moment of the lesson. If you are long, cut recency, not herding.

Press — [**Start the exit ticket**]

Exit ticket

74 to 81

Students — A friend sells after a 10 percent drop. Keep or sell. No stem. Seven-minute timer. Vocabulary stays available.

Say On your own. No stem, no notes from your table. Claim, evidence, reasoning.

You — Circulate, do not coach. If the counter stalls near full with two minutes left, chime and give a one-minute warning.

Press — [**Start closure**]

Closure

81 to 90

You — Point at the objective. Students answer two questions on screen. Take two aloud.

Say Can you justify a conclusion with a claim, evidence, and reasoning? Name one thing you did differently in the second game than the first.

Close — On the tradeoff. The guaranteed dollar was never wrong. It was a different tradeoff from the one most of the room took. With spare minutes, return to herding.

When something goes wrong

Most problems already have a designed path. The rule is the same for all of them: the class never waits for one student.

Sign-in and joining

What you see	What to do
Google sign-in fails for several students	Toggles, [**Class code sign-in**] on. Students choose "Sign in with the class code instead", then enter the code from the board.
Google sign-in fails for everyone on the live site	The site address may be missing from Firebase. Firebase console, Authentication, Settings, Authorized domains, add `www.coachw.club`. Use class code sign-in for now.
"Joining is closed. Tell your teacher."	Toggles, [**Joining locked**] off.
"Class code sign-in is off. Tell your teacher."	Toggles, [**Class code sign-in**] on.
"No class has that code"	The student typed it wrong, or is in the other section's session. Check the code on the display.
A student arrives late	Nothing to do. They join normally, start at the class average balance, and play from the current round. The Flags panel lists them.

During a round

What you see	What to do
Timer hit zero but the round is still open	That is by design. Chime, then [**Lock decisions**]. Or [**Add 30 seconds**].
A student missed the lock	Nothing. They are OUT for the round and earn $1. Say nothing unless they ask.
The round will not settle	Someone has not entered a balance. Press [**Force settle**]. Balances are rebuilt from decisions and rolls either way.
A student keeps missing the math	After two tries the site shows the answer and moves on. Do not stand over them. The Flags panel tracks it.
A balance looks wrong	Every balance is recomputed from decisions and rolls at each settle, so it corrects itself. A student cannot change their own balance.
The dice seem stuck on the display	Press [**Rolling. Reveal now**].

Laptops and screens

What you see	What to do
A laptop dies or a tab closes	Sign back in on the same account. Balance, history, and every response come back, and they pick up at the current phase.
A class-code student switches laptops	Class code sign-in is tied to that browser. On a new laptop they join as a new student at the class average. Keep class-code students on the same laptop when you can.
The display shows a sign-in button	Sign in with your teacher account. Then press F for full screen.
The display shows the wrong session or nothing	Close it and reopen it from [**Open display**] on the hub.
A student needs the dyslexia font	The toggle is in the top bar of every student screen, and on the sign-in screens. For the display, use the Toggles panel or press D.
The hub is in the wrong phase	Phase panel, pick the phase, [**Jump**]. Student and display screens follow.

Feedback and the assessor

What you see	What to do
Assessor light is degraded or down	Say nothing to students. After 20 seconds without feedback, their screens switch to scoring their own response against the guide. The hub keeps retrying in the background.
A score is wrong	Responses panel, Override menu on that response. The student sees your level instead.
The health check fails before class	Teach the lesson anyway. Self-assessment covers it. Afterward, check the Worker's keys in Cloudflare.
A spotlight is still on the display	Spotlight panel, [**Clear**].
The bias survey will not go away	Toggles, [**Bias survey: open**] to close it.

Running behind

Situation	Cut
Ten minutes behind at the CER lesson	Shorten Game 2. After round 6 settles, use the Phase panel to jump to Game 2 complete. Students lose the round 7 checkpoint. Never cut the CER lesson or the exit ticket.
Long in the debrief	Cut the recency beat. Keep herding.
The room gets loud during team rounds	That is the design working. Chime only if it goes off task.
